

Compendium of RMT Series

With magnet and without magnet are available

Without magnet

With magnet

Magnetic design

This magnetic cylinder is basically a pneumatic rodless cylinder featuring a mobile piston fitted with annular magnets.

Two kinds of cushion type

The non adjustable rubber bumpers and the adjustable pneumatic cushioning on both ends of the cylinder ensure the smooth action. If shock absorber be used, the cushioning effect is more perfection.

Double guides

Double guides ensure high precision and can endure proper side load or prejudicial load.

Five bore size are available

Bore size: 16, 20, 25, 32, 40

It is compact in space

Can be mounted from top and bottom.

Superiority of airproof

It is dust-proof as the isolation between the carriage and piston.

Top bolt mounting

Bottom bolt mounting

Installation and application

1. Dirty substances in the pipe must be eliminated before cylinder is connected with pipeline to prevent the entrance of impurities into the cylinder.
2. The medium used by cylinder shall be filtered to 40µm or below.
3. Anti-freezing measure shall be adopted under low temperature environment to prevent moisture freezing.
4. If the cylinder is dismantled and stored for a long time, pay attention to conduct anti-rust treatment to the surface.
Anti-dust caps shall be added in air inlet and outlet ports.

Installation and application

1. How to determine load

1.1) The maxi load to move must be less than the theoretical holding force.

1.2) The relation between loading and stroke as below (Loading center and slide table center must be superposition)

Bore size	Max.Load W(kg)	Stroke scope
16	5	~300mm
20	6	~500mm
25	8	~500mm
32	10	~600mm
40	16	~600mm

2. About shock absorber

- 2.1) Shock absorbers are consumable parts. When a decrease in energy absorption capacity is noticed, it must be replaced. Refer to the table below for shock absorber type.
- 2.2) Never loosen the bottom screw of the shock absorber. (It is not an adjustment screw.) That may cause oil leakage.
- 2.3) Refer to the table below for tightening torques of the shock absorber setting nut.

3. About sensor switch

- 3.1) Sensor switch only can be used for the cylinder with magnet . The magnet located the four corner of body's(refer below) . The cylinder with magnet have both group mounting hole for mounting rail. please refer to below for ordering sensor switch, mounting it into the rsil's groove, adjusting it to proper position, tightening it with proper torque.
